Phase II - Soil and Groundwater Quality Investigation
50 Newfields Road
Exeter, New Hampshire

Dear Mr. Martin,

John Turner Consulting, Inc. (JTC) has completed a Phase II - Soil and Groundwater Quality Investigation at the referenced property. Our work was performed in general accordance with JTC's December 15th, 2021, proposal, the scope of which was approved by Dan Martin of Shanner Luxury Homes.

BACKGROUND

A Phase I Environmental Site Assessment (ESA) was completed in accordance with American Society for Testing and Materials (ASTM) standard E-1527-13 by JTC at the property dated January 4th, 2022. Figures 1 and 2 from the ESA are attached and illustrate the site location and parcel/lot boundaries of the site and surrounding area.

The ESA noted the presence of evidence of a historic Drycleaner on the Target Property between 1927 and 1967 which represented a Historical Recognized Environmental Conditions (HREC) to the Target Property. There were no historical records found on the Drycleaner from the Exeter Fire Department, Exeter Town Hall, ERIS Database, or NHDES One Stop Database. Interviews with the current property owner indicate that there was a dry-cleaning operation on-site between the referenced dates. The dry-cleaning building has been demolished and only the concrete foundation remains. Chlorinated Hydrocarbons were introduced in the dry-cleaning industry in the 1930's, and its use was relatively unregulated until the early 1970's. The introduction of Fluorinated Hydrocarbons in the 1960's also represent concern within dry-cleaning facilities that operated during this time. As these chemicals were regularly used during the time that the dry-cleaning operations occurred on the Target Property, JTC recommended a limited Phase 2 Investigation based on this information. This work plan was reviewed and approved by Mr. Martin on December 15th, 2021 (in conjunction with the Phase 1 ESA Report).

WORK COMPLETED

JTC supervised the completion of the following activities associated with this limited Phase II site investigation:

- A subsurface investigation consisting of the drilling of six (6) soil borings and sampling of three (3) soil boring; and,

Phase II - Soil and Groundwater Quality Investigation

50 Newfields Road

Exeter, NH

- Developing of three (3) temporary groundwater monitoring wells and sampling of three (3) groundwater monitoring wells; and,
- Laboratory analyses of select soil sample in accordance with JTC's executed scope of work and proposal.
- Indoor air screening in existing building for VOCs

Soil Boring Completion and Soil Sampling

Borings B-1 through B-6 were advanced using direct-push methods with a Geoprobe 7822DT drill rig and sampled on January 26th, 2021. Three soil boring locations were selected in the area of the former dry-cleaning building, and three additional locations were selected down gradient from the former structure. Please see the attached boring location plan (Figure 3) for approximate locations of each boring.

Continuous soil samples were collected during the advancement of each boring to depths of between 15 to 20 feet below ground surface (BSG). Materials encountered consisted generally of light brown to brown fine to medium silty sand with some gravel and cobbles. Deeper borings exhibited increasing gravel and cobbles. Soil samples showed no staining, odors, or PID readings were detected. Soil Boring Logs are included as Appendix A.

Collected soil samples were first visually inspected for apparent indications of residual contaminants, and then field-screened with a photoionization detector (PID) to detect the presence of total volatile organic compounds (VOC) as benzene in parts per million-volume (ppm-v). The field PID screening results showed readings of total volatile organic compounds between 0 and 0.3 ppm, which are indicative of background readings (no detections). Complete table of PID readings are provided below:

TABLE 1: PID READINGS

PID READINGS	B-1	B-2	B-3	B-4	B-5	B-6
0-5'	0.0 ppm	0.0 ppm	0.1 ppm	0.0 ppm	0.2 ppm	0.0 ppm
5-10'	0.0 ppm					
10-15'	0.0 ppm	0.0 ppm	0.3 ppm	0.0 ppm	0.0 ppm	0.0 ppm
15-20'	0.0 ppm	0.0 ppm	0.2 ppm	Refusal	Refusal	0.0 ppm

Based on the field PID screening, visual observation, and soil characteristics, JTC believes that the soil borings sampled had not been impacted by dry cleaning operations from past releases.

Confirmatory soil samples were taken from borings B-1 (6-7'), B-2 (10-11') and B-3 (10-11') at the soil-groundwater interface. These samples were submitted to Pace Laboratories in East Long Meadow, MA for Volatile Organic Compounds (VOC) via EPA Method 8260 analysis. **No volatile organic compounds were detected in any samples.** Complete analysis report is provided in Appendix B.

Temporary Well Point Installation

Following the completion of boring program, three of the borings were developed as temporary monitoring wells for groundwater sampling. Borings B-1, B-2 and B-4 were selected to be developed relative to their location and gradient to the former structure. Temporary wells TW-1, TW-2 and TW-4 were developed from the boring locations. Well depth, and depth to groundwater is provided in Table 2 below:

TABLE 2: GROUNDAKER DEPTH READINGS

Ground Water Depth	B-1/TW-1	B-2/TW-2	B-3	B-4/TW-4	B-5	B-6
Well Depth	12.0'	11.0'	-	11.0'	-	-
Depth to Groundwater	4.68'	5.34'	5.20'	5.70'	7.50'	8.2'

The well point was allowed to equilibrate for at least 60 minutes prior to sampling. Sampling was completed with new, disposable polyethylene 1.60" bailer.

Groundwater samples were then collected from each well point and then transferred to laboratory-supplied glassware/vials; placed on ice in a cooler under chain of custody; and delivered to Pace Analytical Testing of East Longmeadow, Massachusetts. The collected groundwater samples were submitted for Volatile Organic Compounds (VOC) via EPA Method 8260 analysis. **No volatile organic compounds were detected in any samples.** Complete analysis report is provided in Appendix B.

Indoor Air Screening

In addition to the subsurface exploration program, JTC also completed an indoor air screening inside the lower level of the buildings on this site. JTC used a PID to screen the indoor air with a focus on any floor penetrations that could lead to vapor intrusion into the building. No elevated levels were detected during this screening event.

FINDINGS AND CONCLUSIONS

The results of this investigation are summarized as follows:

1. Phase 1 ESA:

- Historic Dry-Cleaning Operations:
 - The Phase 1 ESA completed on January 4th, 2022, identified the presence of a former dry-cleaning business which operated at the target property from 1927 to 1967.
 - Based on the historic use, and the demolition of the structure, a limited Phase 2 Investigation was conducted.

2. Soil Borings:

- Soil Conditions: Assessed via borings B-1 through B-6. No soil staining, odors or PID readings were observed in any of the borings. Laboratory analysis of three soil samples indicated no-detections of volatile organic compounds within the tested samples.
- Groundwater Conditions: Groundwater was sampled from temporary well points TW-1, TW-2 and TW-4. Laboratory analysis of three groundwater samples indicated no-detections of volatile organic compounds within the tested samples.
- Indoor Air: Screening of indoor air did not identify any elevated levels of VOCs in the building.
- Conclusions and Recommendations: The results of the investigation did not identify any contamination related to the former dry cleaner operations.
- Future development: Should the property be re-developed, or demolished, a qualified environmental consultant should be retained to observe the excavation to ensure no contaminated soil is identified. No further investigation is warranted for the subject property.

Phase II - Soil and Groundwater Quality Investigation

50 Newfields Road

Exeter, NH

We are available to discuss this report and our findings/recommendations at your convenience and appreciate this opportunity to be of service. If you have any questions regarding this report, please do not hesitate to contact me at (207)-319-0390 or matthewp@consultjtc.com

Respectfully,

John Turner Consulting, Inc.

Notes:

1. Test borings were performed on January 26th 2022 under the direction of JTC.
2. Test boring locations should be considered approximate.
3. Refer to the Test Boring Logs for the subsurface conditions encountered at each boring location.
4. Not to scale.

CASE NARRATIVE SUMMARY

All reported results are within defined laboratory quality control objectives unless listed below or otherwise qualified in this report.

SW-846 8260D

Qualifications:

V-05

Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.

Analyte & Samples(s) Qualified:

Dichlorodifluoromethane (Freon 1)

22A1519-04[B-1 (6-7)], 22A1519-05[B-2 (10-11)], 22A1519-06[B-3 (10-11)], B299902-BLK1, B299902-BS1, B299902-BSD1, S067772-CCV1

V-20

Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.

Analyte & Samples(s) Qualified:

Acrylonitrile

B299902-BS1, B299902-BSD1, S067772-CCV1

The results of analyses reported only relate to samples submitted to Con-Test, a Pace Analytical Laboratory, for testing.

I certify that the analyses listed above, unless specifically listed as subcontracted, if any, were performed under my direction according to the approved methodologies listed in this document, and that based upon my inquiry of those individuals immediately responsible for obtaining the information, the material contained in this report is, to the best of my knowledge and belief, accurate and complete.

FLAG/QUALIFIER SUMMARY

- * QC result is outside of established limits.
 - † Wide recovery limits established for difficult compound.
 - ‡ Wide RPD limits established for difficult compound.
 - # Data exceeded client recommended or regulatory level
 - ND Not Detected
 - RL Reporting Limit is at the level of quantitation (LOQ)
 - DL Detection Limit is the lower limit of detection determined by the MDL study
 - MCL Maximum Contaminant Level
- Percent recoveries and relative percent differences (RPDs) are determined by the software using values in the calculation which have not been rounded.
- No results have been blank subtracted unless specified in the case narrative section.
- V-05 Continuing calibration verification (CCV) did not meet method specifications and was biased on the low side for this compound.
 - V-20 Continuing calibration verification (CCV) did not meet method specifications and was biased on the high side. Data validation is not affected since sample result was "not detected" for this compound.
